PROJECT PROPOSAL FOR CS3200

• **The names of the group members**
    Matthew Manomivibul & Aaron Hoang

• **Description of the project – make sure you describe the data domain**
    We are going to build an online Pokedex which will allow users to search for, add, delete
    and update information about different Pokemon. Our front-end will be a website, and we
    will be using MySQL as our DBMS and we'll be connecting to the DBMS via a simple
    Python server and Django libraries.

• **SQL vs. NO SQL**
    SQL

• **Software, Apps, Libraries and hardware that will be used to develop the project. Are
there any machine restrictions for the project?**
    HTML, CSS, Javascript, MySQL, SQL, Python, Django
    Hardware: MacBook Pro and a Windows PC
    No machine restrictions.

• **Why does this project or this data interest you?**
    It will be interesting to create one of our favorite toys growing up, the Pokedex. We like
    Pokemon and we think a resource that catalogs every Pokemon could be very useful for
    playing the game and deciding on which ones to use.
